Experiment No. 9
Implement Non Restoring algorithm using c-programming
Name: Yah patil
Roll Number: 45
Date of Performance:
Date of Submission:

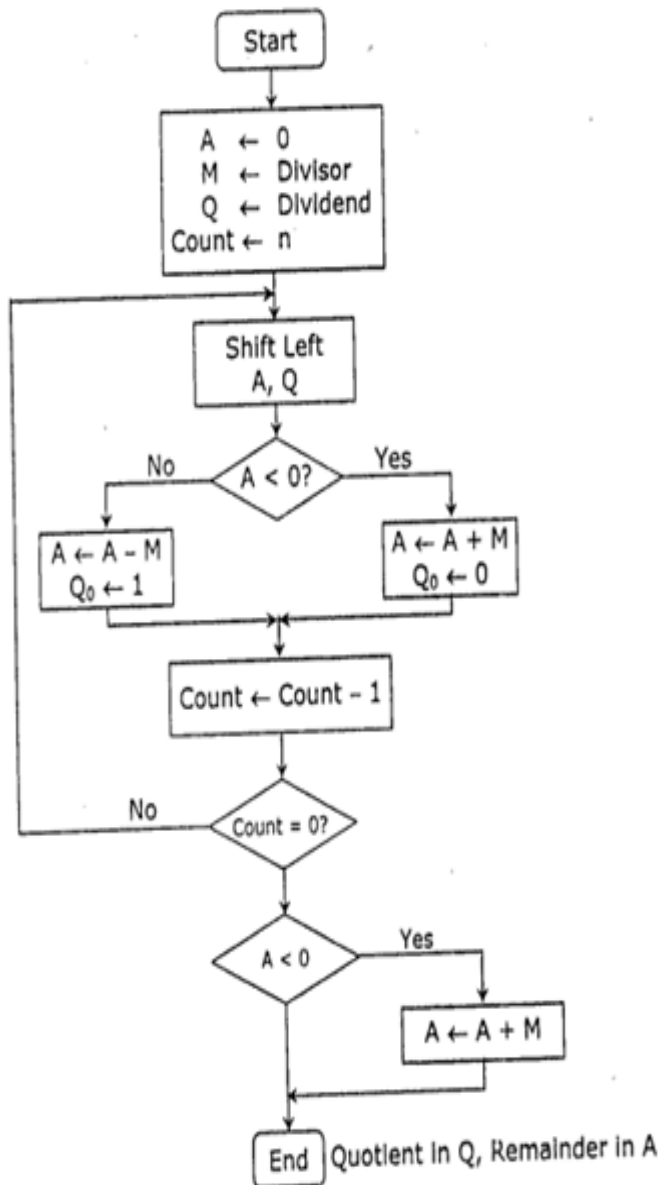

**Aim** - To implement Non-Restoring division algorithm using c-programming.

### Objective -

1. To understand the working of Non-Restoring division algorithm.
2. To understand how to implement Non-Restoring division algorithm using c-programming.

### Theory:

In each cycle content of the register, A is first shifted and then the divisor is added or subtracted with the content of register A depending upon the sign of A. In this, there is no need of restoring, but if the remainder is negative then there is a need of restoring the remainder. This is the faster algorithm of division.

Perform  $8 \div 3$  by non-restoring division technique.

	A Register	Q Register	
Initially	0 0 0 0	1 0 0 0	
Shift	0 0 0 1	0 0 0 □	
Subtract	1 1 1 0		
Set Q₀	① 1 1 1 0	0 0 0 ①	First Cycle
Shift	1 1 1 0	0 0 ① □	
Add	0 0 0 1		
Set Q₀	① 1 1 1 1	0 0 ① ①	Second Cycle
Shift	1 1 1 1	0 ① ① □	
Add	0 0 0 1		
Set Q₀	① 1 1 1 1	0 0 ① ①	Third Cycle
Shift	0 0 0 1	0 ① ① □	
Subtract	1 1 1 0		
Set Q₀	① 1 1 1 1	0 0 ① ①	Fourth Cycle
Add	1 1 1 1		Quotient
	0 0 0 1		
	0 0 0 1		Remainder

### Program –

```
#include <math.h>
#include <stdio.h>
//NON RESTORING DIVISION
int main()
{
    int a[50],a1[50],b[50],d=0,i,j;
    int n1,n2, c, k1,k2,n,k,quo=0,rem=0;
    printf("Enter the number of bits\n");
    scanf("%d",&n);
    printf("Enter the divisor and dividend\n");
    scanf("%d %d", &n1,&n2);

    for (c = n-1; c >= 0; c--)//converting the 2 nos to binary
    {
        k1 = n1 >> c;

        if (k1 & 1)
            a[n-1-c]=1;// M
        else
            a[n-1-c]=0;

        k2 = n2 >> c;

        if (k2 & 1)
            b[2*n-1-c]=1;// Q
        else
            b[2*n-1-c]=0;

    }

    for(i=0;i<n;i++)//making complement
    {
        if(a[i]==0)
            a1[i]=1;
        else
            a1[i]=0;
    }

    a1[n-1]+=1;//twos complement ie -M

    if(a1[n-1]==2)
    {
        for(i=n-1;i>0;i--)
        {
            if(a1[i]==2)
```

```

        {
            a1[i-1]+=1;
            a1[i]=0;
        }
    }
}
if(a1[0]==2)
    a1[0]=0;

for( i=0;i<n;i++)// putting A in the same array as Q
{
    b[i]=0;

}

    {

```

```

        if(i==n)
            printf("\t");

        printf("%d",b[i]);
    }

    printf("\tA+M\n");
}
printf("\n");
for(i=n;i<2*n;i++)
{
    quo+= b[i]*pow(2,2*n-1-i);
}
for(i=0;i<n;i++)
{
    rem+= b[i]*pow(2,n-1-i);
}
printf("The quotient of the two nos is %d\nThe remainder is %d",quo,rem);

printf("\n");
return 0;
}

```

### Output:

```

Output
11111101      0000000_      LEFT SHIFT
11111111      0000000_      A+M
11111111      00000000      Q0=0
11111110      0000000_      LEFT SHIFT
00000000      0000000_      A+M
00000000      00000001      Q0=1
00000000      0000001_      LEFT SHIFT
11111110      0000001_      A-M
11111110      00000010      Q0=0
11111100      0000010_      LEFT SHIFT
11111110      0000010_      A+M
11111110      00000100      Q0=0
00000000      00000100      A+M

The quotient of the two nos is 4
The remainder is 0

```

### Conclusion –

In this work, I am trying to improve the non-restoring algorithm to minimize the hardware cost. If dividend & divisor both are negative then proposed algorithm will not work. Though, in future I can develop this algorithm to divide two signed binary numbers.
